

DSA ROTARY TYPE MG VEHICLE MOUNTS

www.daudsons.com

INTRODUCTION

DSA vehicle turret mount is a rotating platform on a vehicle used to support and elevate a weapon or other equipment, enabling a wide field of fire. These mounts, common on armored vehicles, can be designed for various weapons like machine guns or larger guns and are often equipped with systems for ammunition storage and remote operation. They provide defensive and offensive capabilities by allowing a weapon to be aimed and fired in multiple directions without moving the entire vehicle.

SPECIFICATIONS

S. NO.	DESCRIPTION	DETAILS
1.	Type of Mount	DSA Rotary Type MG Vehicle Mounts
2.	Ring outer/ inner	Steel alloy
3.	Traversing handle	Steel
4.	Frame	Steel
5.	Max. elevation	30 degrees
6.	Platform size	1.1m x 1.2m wide
7.	Thickness of Ring Mount	70 mm
8.	Design	NATO Standards Compliant
9.	Origin (Country)	Pakistan
